

### Geotechnical & Geosynthetics Consulting and CQA

## New Year, New Name, New Services

Dear Customers and Industry Colleagues,  
Peak Engineering Technologies has some exciting news to share. First, we are changing our name to **Peak GeoSolutions** to reflect our widening scope of geotechnical and geosynthetic services.

Secondly, we are proud to introduce two new services: *Geoelectric Liner Integrity Surveys* and *Technical Tailgate Training*. Please read on to find out more!

Also, please keep your eyes open for the coming announcement of our new web site PeakGeo.com and CQA Course offerings!

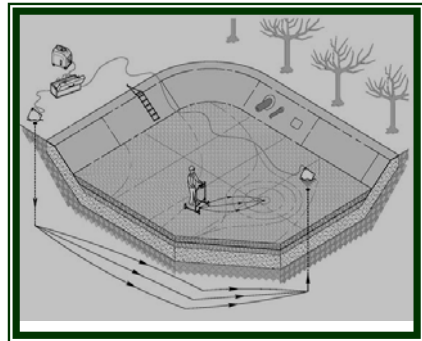

As a final note, we would like to thank our valued clients. You have allowed us to succeed and grow for last 16 years!

*John Stein & Bill Hensley—Principal Owners*

**Electrical Resistivity Testing Provides Quality Insurance!**

### Geoelectric Liner Integrity Surveys

More state regulators and design engineers are specifying liner integrity surveys as the final stage of liner CQA for landfills, leachate ponds, heap leach pads, primary and secondary containment liners, and many other applications. Our CQA services have been used to insure the successful implementation of over 60 million square feet of geosynthetics. Geoelectric Liner Integrity Surveys provide a final measure of a liner's integrity and your project's success. *If you would like to receive a brochure on this technology and our related services please [reply to this email](#).*

### Tailgate Technical Training!

Project Managers are invited to take advantage of over 40 years of combined experience from leaders in the CQA field by putting us on your project to provide "on the ground," "in the trenches" training and tips for your new or under-experienced staff. We will work with the technician on your project until you are confident that he/she can stand alone... and at a cost probably lower than using your own senior staff! *Please [reply to this email](#) if you would like to know more!*

### Coming Soon From PEAK GeoSolutions...

**CQA/QC Short Courses for Compacted Clay Liner and Geosynthetic Installations**

**Peak GeoSolutions Short Course Exclusive!**

We're offering a complete and compre-

Peak GeoSolutions is proud to announce that Bill Hensley and John Stein have obtained proctorship from the **Geosynthetic Institute (GSI)** to administer the exam for the *Geosynthetic Certification Institute - Inspector Certification Program (GCI-ICP)*.
